

Going Green and Increasing Productivity

Back by Popular Demand

Motorola and Revolx are pleased to invite you to this networking session where we will share our knowledge and best practices on making your supply chain Green and Lean!

When manufacturers and any companies that need to turnaround their goods and materials quickly have access to an accurate up-to-the minute view of the supply chain, they only hold what is required, reducing carrying costs. They can process orders for parts more quickly by automating component tracking and put-away functions. The ultimate goal of real time mobility allows a manufacturer to pass savings on to customers by paying suppliers for the parts used instead of parts stocked. They can stock for just-in-time order fulfillment and line replenishment, lowering costs for labor and storage.

Materials and warehouse management solutions combine Motorola mobile computers, barcode scanning and radio frequency identification (RFID) technologies and wireless local area network (WLAN) connectivity with industry-leading partner applications to give you total visibility and control of their inventory. So there will be exactly what customers want, without holding more than is needed. This enables more effective cross-docking and faster picking to expedite shipments. iWMS from Revolx also has the standard feature to manage your bonded goods and materials to the exact requirement of the customs regulation.

Event Details

Date : July 28, 2010

Time : 9 to 12noon

Venue : Motorola Electronics Pte Ltd
12 Ang Mo Kio St 64
Cremon Room, Level 5
Ang Mo Kio Industrial Park 3
Singapore 569088
