

Established since 2013, KEYfields has developed and acquired a list of solutions for our integrated platform suite of solutions (iLOGON – LOGistics Online) for the logistics and transport industry. iLOGON has been developed and deployed in the region for many years and numeral versions have been added based on business partner's feedback and market needs.

Our objective is to provide highly adaptable and practical enterprise integrated solution. These systems can be deployed independently or fully integrated across other business-centric modules to bring productivity and profitability to a new level. We do not only provide solutions but more importantly the domain knowledge that help our business partners to adopt the best practice in a practical approach.

## Suite of Solutions

**KEYFIELDS**  
surpassing excellence

## Case Study

### Industry

Heavy Lift and Haulage Services

### Challenge

A large fleet of transport equipment which the current half-computerised and half-manual operational process became a 'bottleneck' for expansion to overseas markets.

### Solution

Implemented iTMS with functionalities encompassing centrally captured bookings by the customer service, planning and prescription of job orders against existing fleets and resources by the traffic planner and alerting, monitoring and ensuring successful completion of jobs by the traffic controller, maintenance of fleet information and resource's particular and skill sets to billings.

### Benefits

A fully integrated Transport Management System for all transport equipment like mobile crane, prime mover and trailer, lorry and others.

**Information like readily available for planning purpose.**

**Billing automatically generated and 'miss' invoices are no longer happening.**
